Harrold's Seed Brokerage List

" HIGHEST QUALITY AT A SAVING "

HARROLD'S — Brokerage Division.

P. O. BOX 29 - K, GRANTS PASS, OREGON.

VOL. 1, NO. 1 — DECEMBER 1, 1949.

We Can Save 10 to 35 Percent For You

NO SACRIFICE OF QUALITY

A REVOLUTIONARY OFFER

IT WILL PAY YOU TO READ THIS FOLDER

The offer we make here is one that has been under consideration for several years. A great deal of planning has gone into the ground-work of this offer before we submitted it to you as a professional member of the horticultural trade. We have also waited until the seed industry had come into more stable production after the war. Whether we can make this plan succeed in making substantial savings for you depends on whether we can convince you of the logic and potential service we are offering and its value to you as an individual. It will afford you substantial savings without loss of quality on items that are a substantial item of your overhead. We are gambling the distribution of this one folder issue to determine whether you agree with us that it is possible to distribute flower seeds of standard varieties and strains at a more reasonable level. Your reaction to this offer will determine whether we make this a permanent department of our business and develop and refine it in the future.

THERE WILL BE NO COMPROMISE IN QUALITY

As many of you know, our firm has been active in the wholesale seed, bulb and nursery trade for nearly half a century - since 1902 to be exact. The name Harrold's has been recognized as representing the ultimate in quality for many years. Under this new department we intend to continue our closest attention to quality the same as in the past. We have distributed many of these varieties of seeds for more than 20 years and our supplies under this program will be from the identical specialists who have supplied these varieties to us during that time. None of our Harrold Bred Specialties will be included in this department's stock. They will be continued exactly as in the past. Rather this stock will be confined to those varieties and strains that are completely standard in the seed and Nursery trade. The seeds that we will supply from this and future price-lists will come from the cultures of six of the largest, most reputable and best known general seed growers on the West Coast. Among them they produce more than 75% of the seeds of these varieties now distributed in the American market. Whether you buy from this list or from any other American seed dealer the probabilities are great that you will receive the same seeds from the cultures of this same group of growers. They are the only source of a great many of these varieties we list here. WE INVITE DIRECT COMPARISON OF PRICES OFFERED HERE WITH ANY QUOTED BY OTHER DEALERS.

WHY WE CAN AFFORD YOU THESE SAVINGS

From your standpoint every dollar you save in operating costs without reducing production and quality is the equivalent of an increase of \$5.00 in business done. There are few concerns today who can show a net profit of 20% on their operation. Therefore with gross operating overhead representing an average of 80 to 85% of your gross sales every cent you can cut from this overhead is the equivalent of an increase of about five times that amount in returns from sales.

There are definite reasons why we anticipate being able to swing this

plan to the benefit of all concerned. Some of these reasons we enumerate as follows.

1: This program as planned is so attractive that we feel sure of developing a substantial volume right from the start. It is a common principle in the business world that volume sales mean either greater profits or lower prices. We are gambling that in passing the savings of large scale distribution on to you we can justify these unusually attractive prices.

2: We don't intend to load in a heavy, speculative inventory. Our years of experience in this industry have demonstrated that because of the serious problems caused by outdating of seeds with the resultant heavy inventory losses, present high markups are necessary if much inventory is to be of a speculative nature. Our proximity to the growing sources of this material makes it practical to render reasonable service and delivery with a minimum of inventory. This is also a great advantage from your standpoint. It almost completely eliminates carry over of seed from one crop to the next. We will always supply you with seeds of the latest available harvest.

3: We are not going to offer Super-Duper special services - 12 hour shipment, free air shipment or other specials under this program. We do expect to maintain supplies in our shipping warehouse that will enable us to ship under average conditions in a reasonable time and in case of shortage we can fill in from growers stock within approximately a week. The savings this plan affords you makes it well worth your while to anticipate your needs by a matter of two or three weeks; even a month and to order your requirements in adequate time. We can both save money if you plan your schedules in advance without affecting quality results in any way. Lack of foresighted planning and procrastination in ordering has to be passed on to you in higher prices. It necessitates larger investment in inactive inventory and maintenance of a bigger, more costly organization to give you super service at peak rush periods. If you expect the seedsmen to do your planning for you and render 12 hour service he must place speculative contracts for seeds to supply this type of trade from six to twelve months in advance. This makes heavy inventories with their outdating losses and a larger office force mandatory. All of this must be added to the price of the seeds.

4: We can offer you the best possible "spot" deliveries. That is because of our close proximity to the major producing areas. We are able to fill in "spot" on short notice whenever our inventory runs low or when you want some items in larger quantities. If you want unusually large quantities of any of this stock we shall indeed be glad to quote special quantity prices. While normally certain specific groups of this stock will come from a specific grower, our wide experience with the cultures of all six of our growers enables us to cover on shortages as long as stock is available in the growers hands anywhere out here on the coast.

A NEW SYSTEM OF PRICING AND QUANTITIES

We believe that we are introducing in this folder, the most logical and unusual pricing method introduced to the seed trade in the last fifty years. As we all know there has grown up in our trade, through common usage, a system of fractional

weights which afford absolutely no basis of quantity comparison of the seeds in a given fractional amount without extensive figuring. This currently used system is also far from efficient when a breakdown of quantities is involved for it requires as many as seven fractions between the $\frac{1}{100}$ th. ounce and the full ounce. The system we are trying to inaugurate here will afford much greater flexibility. While the $\frac{1}{100}$ th. ounce will be the smallest unit in finer more costly seeds and $\frac{1}{10}$ th. ounce in the cheaper varieties this method of pricing permits the computing of price and quantity in fractional ounces with but two or at most three price groupings. It also affords much closer matching of purchase to needs as a larger number of fractions may be computed for the in-between quantities often desirable. There is also the advantage and convenience of direct comparison of number of seeds in a given quantity as well as production requirements based on average production from a given unit of seeds. While on first examination this system may seem strange a little thought will show that it is logical and simple. Being based on decimal instead of geometrical fractions the convenience will be quickly apparent and it will be found simple and most effective in use. We only suggest a little care in making up your orders until you have familiarized yourself with its principles.

ALL PRICES BASED ON A UNIFORM UNIT

In examining our price formula it will be found that but three units have been used, the $\frac{1}{100}$ th. ounce; the $\frac{1}{10}$ th. ounce and the ounce. By doing this any amount of seed, from $\frac{1}{100}$ th. ounce to several pounds can be easily and quickly computed both as to price and probable production in units so flexible as to make much closer buying practical. How many times have you bought an ounce of seed when actually you needed only $\frac{3}{4}$ th. of an ounce simply because the price jumped from $\frac{1}{2}$ to a full ounce? You probably justified this by telling yourself that you could carry over the overage to the next planting season only to find your storage conditions were not good and it was a total loss or that you didn't want to plant that variety later. With the pricing system on a decimal basis you can match your purchases much more closely to your current requirements at a saving in cost that is substantial.

From the seedsmen's standpoint this system affords a simpler pricing formula which is much easier for order clerks to handle and by installing scales having their calibration in $\frac{1}{100}$ th. ounce the packaging routine is simplified and possibility of error much reduced. This gives a much better efficiency in marketing with its resultant saving in handling costs. From every angle we believe this method has much to offer. Whether we can make it our regular practice in serving you depends on you, our customers and the support you give it. We'd really appreciate any comments you might care to make on it and any suggestions you may feel would improve it.

COMPARISON WITH CURRENT FRACTIONS

We give here a table of the commonly used fractions and their nearest comparative quantity in decimals. These are carried on through to the thousandth in order to be completely accurate but for practical purposes the first two figures will give the hundredths and the first figure the tenths equivalent. These figures will be found of interest as a comparison and guide to ordering from this list. **WE ESPECIALLY REQUEST THAT IN COMPARING OUR PRICES THAT YOU DO SO ON THE OUNCE BASIS.** In the case of our price per $\frac{1}{100}$ th. ounce add two zeros to our $\frac{1}{100}$ th. price and compare with the ounce price of most seedsmen. Where listing is per $\frac{1}{10}$ th. ounce add one zero and you have the ounce rate for comparison. In most cases you will find our prices on minimum (less than half ounce prices) to be lower than most current prices by the full ounce unit.

.015 Oz. equals $\frac{1}{66}$ th. Oz.	.125 Oz. equals $\frac{1}{8}$ th. Oz.
.031 Oz. equals $\frac{1}{32}$ nd. Oz.	.250 Oz. equals $\frac{1}{4}$ th. Oz.
.062 Oz. equals $\frac{1}{16}$ th. Oz.	.500 Oz. equals $\frac{1}{2}$ Oz.
.750 Oz. equals $\frac{3}{4}$ ths. Oz.	

Our unit $\frac{1}{100}$ th. Oz. is slightly larger of course than the usual $\frac{1}{128}$ th. Oz. Any intermediate sized unit may be easily figured from this pricelist.

SEED COUNT QUANTITY COMPARISONS

It will be noted throughout this list that we have given at the heading of each group the approximate number of seed in each $\frac{1}{100}$ th. or $\frac{1}{10}$ th. ounce. The average germination percentage under good production conditions are also given as a guide to ordering to meet your specific requirements. In giving these figures there is no attempt being made to guarantee specific production or to guarantee your cultural skill and conditions. No seedsman can do that. For that reason all offers we make are subject to the conditions of the standard seed trade agreement of guarantee appearing elsewhere in this folder and no exceptions to this will be made.

UNIFORM TERMS OF SALE RELATING TO PURCHASE AND TRANSPORT

Credit and the book work that it involves has been no small item in causing increasingly higher prices in the seed trade. To afford this sort of service to you bookkeeping and added clerical costs, collection costs and credit losses must naturally be calculated in the list price of the merchandise by the seller offering this service. It is true that credit buying is convenient at times but as many of these items are purchased but once or twice a year, you are after all paying a pretty good price for this service in comparison with the prices and service offered here. While some firms offer a cash discount of 2% or 5% this does not compare with the savings under the same circumstances available to you here.

AT THESE PRICES WE OFFER BUT TWO METHODS OF PAYMENT

We recommend and prefer that you remit the entire purchase price with your order. If you do this we will prepay the postage on your order at the prices quoted here.

Otherwise you may remit 50% of the purchase price with the order and we will ship the merchandise with the balance C. O. D. If this is done, however, we will add all transportation and collection charges to the amount of the C. O. D. so that you will be paying transport costs as well as the collection fee. Present rates make these charges substantial.

IN CONCLUSION

We feel that we have explained our new service here in a manner that points up its value and advantages to you in a clear, understandable way. We honestly feel that we have a fine line of products at the most attractive prices available in the professional trade and that we can also afford you good service in addition to these savings. We shall be glad to supply any of these items at the quoted price as long as present market prices continue. It is of course understood that a change in market price will mean that our prices must change and as is common practice in this trade this does not necessarily mean that notice be given when the change is reasonably small. Should costs be changed radically you will be consulted before shipment. All offers are made subject to availability when order is received.

We shall look forward to serving you this season and suggest that you give immediate consideration to your full seasons requirements in this selection of stock.

Shall We Continue to Send You These Lists?

This Is Different Than Any Seed List You've Ever Seen Before.

IN ORDERING FROM IT PLEASE OBSERVE THESE CONDITIONS. It will be noted that some items are listed in units of .01 oz. ($\frac{1}{100}$ th. oz.) or .1 oz. ($\frac{1}{10}$ th. oz.) in less than ounce quantities. If listing is by .01 oz. and you normally use $\frac{1}{4}$ oz. order (25/100ths.) to get $\frac{1}{4}$ th. oz. Where listing is per .1 oz. and $\frac{1}{4}$ th. oz. is desired either order .2 or .3 which bracket the .25 which is the decimal of $\frac{1}{4}$ th. oz. All other quantities may easily be computed in the same way. **PLEASE NOTE** that there are specific minimums on each item showing the smallest amount of a variety that can be ordered. Quantities of one ounce or more are quoted in most cases per ounce and any fractional ounce included with a full ounce may be computed in the listed unit at the ounce rate. **EACH VARIETY** must be treated as an individual purchase and may not be combined with other varieties for a lower quantity price. Please list all items decimally as .1 for tenths and .01 or .25 for hundredths instead of by fractions wherever possible. We will, however, accept orders for fractions within the limits of quantities offered here and compute them for you in the event that our instructions are not clear.

Petunia Seeds

GIANT FLOWERED RUFFLED

About 150,000 seed per ounce. Average production 900 plants per .01 ounce.

VARIETY	COLOR	.01 to .10 ounce	.10 to .50 ounce
DWARF GIANTS OF CALIFORNIA: Ramona Dark Shades.80	.60
